In subtraction problem, we can check the difference by the method of casting out nine.
(Remember that subtraction is reverse of addition).

EXAMPLE

$4897 - 2186 = 2711$

$4897 - 2186 = 2711$

$19 - 8 = 2$

$10 - 8 = 2$

$2 = 2$

Let us Know

Think of a two digit number say 52, reverse the digits of that number and subtract from 52.

Difference = 52 – 25 = 27

27 is a multiple of 9.

Activity

Number	Reverse Number	Difference	Sum of the digits
92	29	92 – 29 = 63	6 + 3 = 9
14		– = 27	
–	38		
17			5 + 4 = 9

Exercise 3.2

1. Circle the multiples of 9 (by using casting out nine).

a) 9443 b) 1008 c) 24689 d) 23769 e) 13476

2. Circle the correct addition fact (by using casting out nine).

a) 4355 + 5369 = 9724

b) 7632 + 2213 = 9845

c) 6023 + 3203 = 9220

d) 2436 + 5315 = 7701
