

Difference between 2-D and 3-D objects:

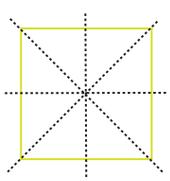

Concept	2-D	3-D
Definition	Two dimension	Three dimension
Dimensions	Length and breadth	Length, height and width.
Examples	Square, rectangle, circle, triangle, rhombus, parallelograms, trapezium, quadrilateral	Cube, cuboid, cone, cylinder, pyramid.

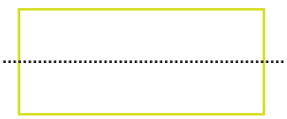

1.1 Introduction of symmetry

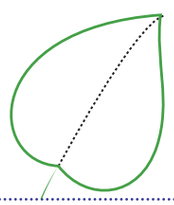

In our day to day activity we see many leaves of plants, blades, wings of **butterflies etc.**

The figures which can be divided into two parts of equal shape and size are called symmetrical figures.

EXAMPLE

1. 

2. 

3. 

The two halves of the figures are the mirror images of each other.
