3.2 Estimation of the volume of a liquid contained in a vessel and verification by measuring.

Situation

Sheela's mother prepared an orange juice for her daughter's friends. Sheela wants to share the juice with her four friends equally. But before that they want to know how much juice does the bottle contain. They have given an estimated measurement of 950 ml. They want to mesure the juice in a 200 ml glass through that they want to verify. They found that the bottle juice fills the five 200 ml glasses completely. From this they have come to know that the bottle 1000 ml of juice.
