4. Heart

BTD61

Our heart is the pumping organ. It pumps blood to all parts of the body. It lies in between the lungs almost in the centre of the chest. It is made up of **muscles**.

More to Know

The heart beats about 72 times in a minute.

Let us Make

Stethoscope

Things we need: Flexible tube, Two small funnel, Duct tape, Medium-size balloon and Scissor

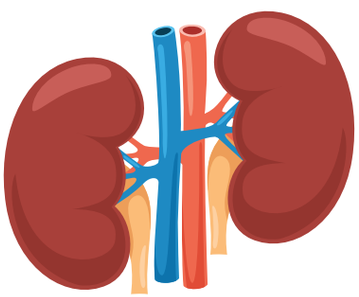

Steps to construct:

1. Put the small end of the funnel at both ends of the flexible tube tightly.
2. Tape the funnel and the tube using duct tape.
3. Inflate the balloon to stretch it out.
4. Let the air out and then cut the neck of the balloon.
5. Stretch the remaining part of the balloon tightly over the open end of the funnel, tape it in place.

6. Place one funnel end of the stethoscope on the heart and the other funnel end near your ear.
7. Can you listen to the sound of the heart?

5. Kidneys

We have two kidneys. They are bean shaped organs.

The kidneys purify blood by filtering excess water and toxins.
