Work and Energy

Learning Objectives

After learning this lesson students will be able to

- define work.
- understand work and energy.
- know simple machines.
- classify types of machine.
- know about three types of lever.

IMKWX

Let us Recall

Teacher : Students, you have studied about force in your lower class. What is force?

Students : A force is a push or pull that moves an object at rest or stops an object in motion.

Teacher : There are different kinds of force. What are they?

Students : Frictional force, Gravitational force, Muscular force and Magnetic force.

A force can cause an object to change its shape, speed or direction.

I. Work

An action in which one exerts a force to move an object is known as **work**. What do you understand from the pictures given below?

From these pictures, we understand that a force is applied to do some work.
