II. Food materials

What is food? Food is one of the basic needs of our life. Food provides energy. It is usually made by cooking plants or animals. It contains essential nutrients to keep our body healthy.

Needs of food

- Gives energy
- Promotes growth
- Improves immunity
- Helps our body repair itself

Food can be classified into two types.

1. Raw Food - Raw food is the food that does not need to be cooked to eat.
Examples: Fruits, carrot, ground nut seeds.

2. Cooked food - Cooked food is the food, that has been cooked to eat.
Examples: Rice, vegetable curry, bread.

Let us Do

Simple tasks such as pouring liquid into the bowl, sprinkling pepper on the omelet or dosa, peeling off onions, powdering coriander seeds can be done by you. Always help the elders in the kitchen.
