5. Waterproof Materials

Materials that do not allow water to pass through them are called **Waterproof Materials**.

Example : Raincoat and aluminium foil of tablet strip.

Think and answer

Do you have a raincoat? What is its use?

Activity

Take a glass bowl. Fill three fourth of it with water. Put an orange fruit with peel and an orange fruit without peel. Observe which orange floats? Why?

III. Transparent, Translucent and Opaque objects

Have you ever seen through the bus window?

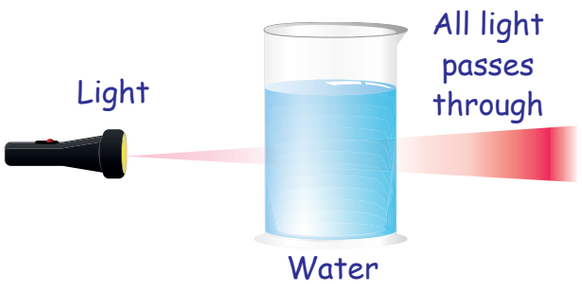

SR8XN

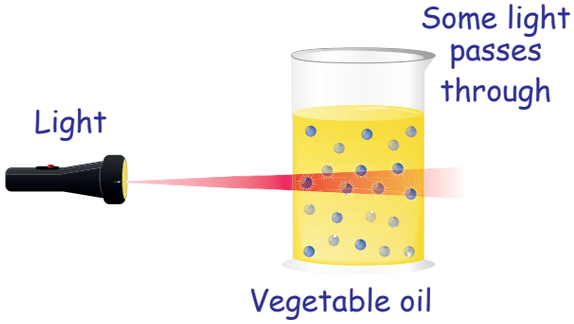

Some objects allow light to pass through them. This helps us to see through them as the window of a bus. Let us see how different objects behave with light.

1. Transparent Objects

Transparent objects allow the light to pass through them. So, we can see other objects clearly through **Transparent Objects**. **Examples:** Air, glass and pure water.

2. Translucent Objects

Translucent objects allow some light to pass through them. So, we cannot see objects clearly, but we see them as blurred images through them.

Examples: Paper soaked in oil, snow and vegetable oil.
