1. Renewable Resources

Renewable sources of energy are replaced naturally over a period of time. We can keep using these sources for a long period of time. Since the beginning of human life, we have been using these resources. We use these resources for light, transport, cooking, heating. Eg: Sun, Wind and Water.

2. Non-renewable Resources

The resources which are not easily replaced once used are called the non-renewable resources. Eg: Petrol, Coal and Natural gas

More to know

The law of conservation of energy states that energy can neither be created nor destroyed. It can be converted from one form to another.

The SI unit of energy is joule.

It is named after James Joule who explained about energy.

III. Simple machine

Observe the above pictures.
What are they used for?
