In our daily life, we depend on plants and animals for our food. Some can be eaten raw but most of them need to be cooked. Let's see what food can be eaten raw and which one needs cooking.

1. Raw Food (Uncooked Food)

Think and answer

Which food do you eat without cooking?

Food that we eat directly without cooking is called **raw food**.

We eat fruits, some vegetables, tubers and nuts in the raw form. Some pulses and cereals are also eaten as raw food. All raw food must be washed with clean water before eating. Some of the raw food items are given below.

Fruits

Vegetables

Tubers

Nuts

Let us Do

Arrange some fruits, vegetables, nuts and tubers on the table and ask each student to pick one food item. Based on what food item they choose, divide them into four groups.

Let us Make

Shall we make some salad?

Collect some raw food items available in your locality. Clean them with fresh water, cut them into small pieces (keep the nuts whole), put them in a bowl then add salt, spices and mix it well. Enjoy your tasty salad!
