Do you Know?

One third of the food produced in the world is wasted. It is a total of 1.2 lakh crores tonnes per year. (1 ton = 1000kg)

Food Preservation

We can preserve the food for long time by using the following methods.

Pickling - Mixing fruits and vegetables with oil and salt.
Example- Pickle

Refrigerating - Keeping food in the refrigerators (fridge) to preserve them for a short time.
Example-Fruits, Vegetables

Drying - Removing the water content of the food.
Example- Fish, Red chillies

Canning - Storing food in air tight containers.
Example-Jam
