Water occurs naturally in three forms: ice, water and water vapour.

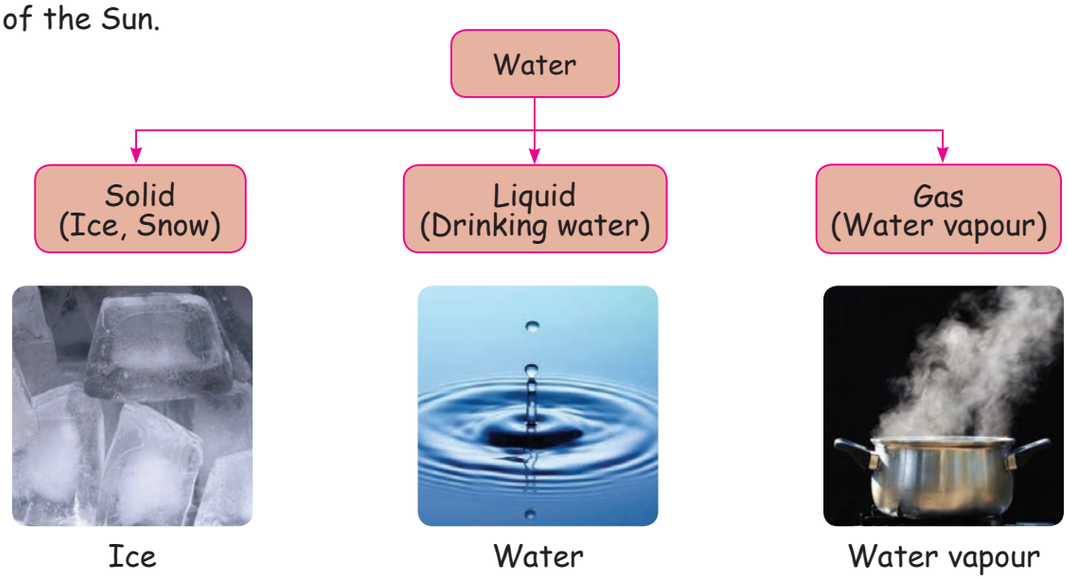

These forms are also called states of water. Ice is in solid form, water is in liquid form and watervapour is in gaseous form.

More to know

Human body consists of 75% of water.

These states occur naturally because of temperature changes. Water becomes ice in cold regions, remains as water in oceans/rivers and becomes water vapour due to the heat of the Sun.

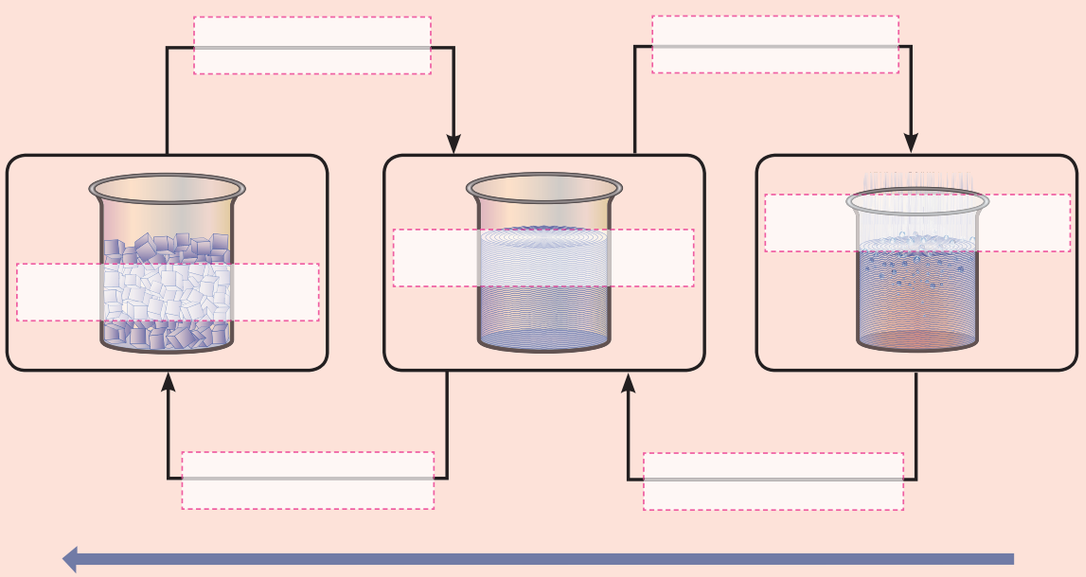

Let us do

Fill in the boxes given below with correct answers.

(Liquid, Solid, Melting, Freezing, Cooling, Heating, Gas)

Change of States in water
