Importance of water cycle

- To improve the availability of ground water.
- To control the Earth's temperature.
- To provide water to plants and animals especially humans.
- To recycle the Earth's supply of water constantly.

Try to Answer

1. Unscramble the words and fill in the blanks.

   ondencsaonti, vaeionorpat, ecippitatrino

   _____, _____, _____.
2. Is water cycle important for farming? _____
3. Why is water cycle important to human? _____
4. Name the process which is responsible for the formation of droplets on the surface of a glass of cold drink. _____

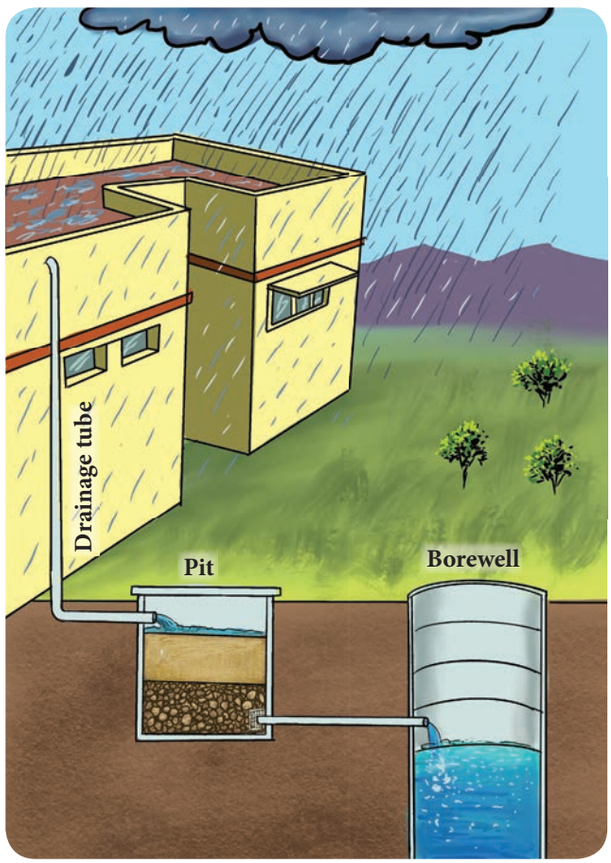

73% of our brain's mass consists of water.

The Antartic region has about 70% of the worlds fresh water.

III. Rain Water Harvesting

'Rainwater harvesting' is the process of collecting and storing rainwater for future use. Rainwater can be collected in natural reservoirs or artificial tanks. Roof top harvesting is also a type of rainwater harvesting. The rainwater on the top of the building is collected and passed into the ground through pipes. Water passing through the pipes enters the pit which consist of gravels and Coarse sand. As it passes impurities are filtered and stored as ground water.
