Petal: Petals are often bright coloured. Their main job is to attract insects such as bees or butterflies, to the flower. The insects help the flowers in the transfer of pollen grains.

Stamen: Stamen can be seen at the centre of a flower. They contain pollen grains that help the plants to multiply. It is the male part of a flower.

Pistil: Pistil is also seen at the centre of the flower. The pistil uses the pollen to help the flower become the fruit. It is the female part of a flower.

More to know

The largest flower in the world is Rafflesia. This rare flower is found in the rainforests of Indonesia.

Try to Answer

Fill in the blanks.

1. Sepals _____ the flower while it is still a bud.
2. Stamen contains _____ grains.
3. Pistil is _____ part of a flower.

Let us do

Bring few hibiscus flowers to the classroom. Distribute the flowers to children. Introduce the parts of the flower to them. Then, ask them to observe and feel the different parts of the flower and tell them to record their observation.

Parts of flower	What is its colour?
Petal	
Sepal	
Pistil
