Advantages of Group behaviour in animals.

S.No	Group behaviour	Example
1.	Procuring food	Hunting and sharing in tigers.
2.	Taking care of young ones	Female elephant takes care of its calf.
3.	Protection from predators.	Wilde beests make sounds to alert their group.
4.	Division of labour	Honey bees collect nectar, build comb and clean hive etc
5.	Energy conservation	Birds fly in "V" shape to reduce wind resistance.

Sea otters hold hands while they are sleeping, so they do not drift apart.

Adaptations in Animals

Adaptation is the most essential factor of all living beings. The changes in an animal's behaviour to adjust with its habitat is called adaptation. If an organism fails to adapt to the particular environment, its survival is difficult.

All animals have special body parts to live in a particular place at a particular time. E.g. Giraffes have developed very long necks because of their environmental demands.

ACTIVITY

Observe any animal in your surrounding and write a creative short story about it.
