Oxygen

It is one of the main components of air. The amount of Oxygen present in air is about 21%. All the creatures cannot live without oxygen. It can be tested with a piece of glowing splint, which relights in oxygen.

Uses of oxygen

1. All living things use oxygen for breathing.
2. Oxygen is essential for burning.
3. Oxygen cylinders are used in hospitals to enable the patients to breathe when they cannot breathe normally.
4. Oxygen is used in gas welding.

Do You Know?

Mountaineers carry oxygen cylinders at high altitudes.

Deep sea divers also carry oxygen cylinders along with them while diving deep into the sea.

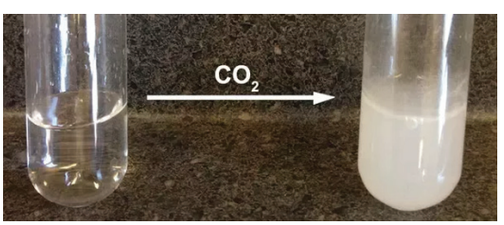

Carbon dioxide

The amount of carbon dioxide present in air is only 0.03%. Though it is less in percentage its uses are more and essential. It can be tested with lime water. The lime water changes from colourless to milky.

Uses of carbon dioxide:

1. Carbon dioxide helps plants in photosynthesis.
2. It is used in fire extinguishers.
3. It is used in refrigerators as dry ice for cooling purposes.
4. It is used to make plastics and polymers.

Do You Know?

The Scottish chemist Joseph Black discovered that carbon dioxide is present in air.
