Friends: Don't we all wish for a 'COOK ROBOT' at home!

Anitha: Adding to my excitement, a robot collected and dropped an empty water bottle into the dustbin. Then, it advised all of us to use dustbin.

Anitha: Then there was a robot that asked me, "Do you want to make a robot?" I eagerly nodded my head and said "Yes! But, I don't know how to make it." It replied, "Don't worry. I will help you."

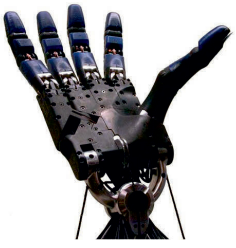

Then, it said, "Let us make a robot that can run. There are three main parts in this robot. First is the controller, it acts as the brain. Second is the mechanical parts that will help the robot move. Third is the sensors that will help the robot sense walls and other things on its way so that it does not crash into these objects. All these parts work together to make the robot run."

controllers

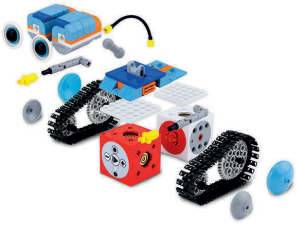

Then, I put these 3 parts together with the robot and made a robot myself. This expo has made me really interested in robots. I am planning to make more robots. Will you all join me?

mechanical parts

Friends: We would love to!
