1. Sources of Milk

Milk is primarily obtained from mammals. It is also obtained from other sources. Examples: Soya milk, nut and seed based milk.

2. Nutritional value of Milk

Milk contains water, sugar, protein, fat, vitamins and minerals.

Based on the amount of fat present in the milk, it can be classified as whole milk, low fat milk and fat free milk.

Sugar : Milk has sweet taste because it has a special sugar called lactose.

Protein : It helps to build muscles.

Fat : Fat present in the milk is called butter. Butter is more delicious than any other fat.

Vitamins : Vitamin-D in milk helps to maintain the bones.

Minerals : Calcium is a mineral. It helps to build healthy bones and teeth.

People all over the world get their milk from mammals like sheep, goat, camel, donkey, horse, yak, water buffalo, reindeer and even moose.
